

I come from a simple village background, where my father works as a farmer. Growing up, I learned the values of hard work, discipline, and patience from my family. These values have played an important role in shaping my journey and motivating me to aim higher in life.

Last year, I took admission in the Computer Software Application (CSA) trade at NSTI Bangalore with the dream of building a career in the IT sector. Initially, adapting to technical subjects and coding was challenging for me. However, with continuous effort, guidance from my trainers, and regular practice, I gradually improved my skills.

During my training at NSTI Bangalore, I developed strong interest in coding and software development. Over time, I gained confidence in programming and problem-solving, which helped me grow into a better and more disciplined coder. The practical exposure and structured learning environment at NSTI played a key role in my overall development.

Today, I am actively preparing myself according to the current IT industry requirements. I am continuously upgrading my technical skills and focusing on achieving my goal of securing my dream job in the IT sector. I strongly believe that my journey from a village background to a confident aspiring IT professional is a result of dedication, learning, and the quality training provided at NSTI Bangalore.
